IV Rooms That Think With You

V Screens, Tamed

VI The Graceful No

VII Meetings and Other Weather

VIII Recovery Protocols

IX Focus and the Body

X A Long Attention Span Life

The Interruption Economy

Somewhere in the last fifteen years, being reachable became a moral obligation. The message arrives, the badge glows, and a small social contract activates: someone wants you, and wanting is urgent. It took a decade of design brilliance to make ignoring a notification feel like rudeness. It was not an accident. It was a business model.

The economics are simple. Your sustained attention is worth more to you than to anyone else: a focused hour compounds into skill, work, and thought that belongs to you. But your fragmented attention is worth more to everyone else. Fragments can be sold. And so a trillion-dollar industry exists to convert the first kind into the second, thirty seconds at a time.

The good news hides inside the bad: because the assault on attention is designed, it can be un-designed. Focus is not a personality trait you missed out on. It is a set of conditions, and conditions can be built. This book is about building them, deliberately, humanely, and without pretending you can live outside the modern world.

We begin with an honest audit. Not of your willpower, but of your environment. For one ordinary day, you are going to count

interruptions the way an accountant counts expenses, and the number will annoy you into the rest of this book.

Three Layers of Attention

Attention is not one thing. There is the surface layer: the flicking, scanning, triaging mode that gets you through email and traffic. There is the middle layer, where meetings and conversations live. And there is the deep layer: the slow, expensive, gloriously productive state where hard problems actually move.

Modern work has quietly reorganised itself around the first two layers. The deep layer, the only one where your most valuable output happens, is treated as a luxury, something you get to after the messages, which means never. The deepest layer of your working mind has been rescheduled to a time that does not exist.

The rest of this book is a reclamation project, and it starts with a rule so simple it sounds like a trick: the deep layer gets scheduled first, or it does not happen. Not longer hours. Earlier ownership.

C H A P T E R T H R E E

The Deep Block

One block, most days, ninety minutes, one difficult thing. This chapter builds the ritual around it: the start cue, the shutdown, the door policy. It also shows why consistency beats heroism every single week.

You will also learn the two-minute entry ritual that eliminates the worst part of deep work: the cold start.

Rooms That Think With You

Your environment votes on your behaviour before you do. Here we design the physical setup that makes depth the path of least resistance: light, sound, sight-lines, and the single-purpose corner.

It costs less than you think. Most of it is subtraction.

C H A P T E R F I V E

The Graceful No

Every yes is a scheduling decision made on behalf of your future self, usually without consulting them. This chapter provides kind, firm, reusable scripts for declining meetings, deferring messages, and negotiating response times without spending social capital you don't have.

The remaining chapters cover recovery after broken focus, the physiology of attention, and what a long-attention life looks like when the system becomes invisible.

*Here ends the open preview. The complete edition arrives
the moment you purchase it at zokario.com, every
chapter of it, with lifetime online reading.*
